Company Overview

SafeEdge Consulting Ltd is an independent UK consultancy specialising in Health & Safety management, Fire Risk Assessments, and compliance solutions for high-risk industries including manufacturing, engineering, construction, transport, and warehousing.

We partner with organisations to strengthen compliance, reduce incidents, and embed a culture of safety and accountability throughout their operations.

With extensive experience across multiple sectors, SafeEdge provides hands-on, practical support – from site inspections and documentation to training and project-specific consultancy.

Our approach is grounded in technical expertise, attention to detail, and a genuine commitment to improving workplace safety and operational performance.

DSEAR / ATEX

- Dangerous Substances & Explosive Atmospheres Assessments
- Zone Classification & Explosion Protection Documentation

Fleet Safety & Transport Risk

- Fleet Management Audits
- Driver Competence & Safety Procedures
- Vehicle Inspection and Compliance Reviews

Case Study Chemical Company

Sheffield

SafeEdge Consulting provides ongoing Health and Safety support to this industrial manufacturing client, focusing on DSEAR compliance and hazardous area zoning within their drum reconditioning and processing facility. Following an initial site inspection and risk review, **SafeEdge** conducted a full DSEAR assessment and zoning exercise, identifying flammable atmospheres associated with cleaning and drying operations. We produced detailed documentation, including Explosion Protection Documentation (EPD), and established an ongoing compliance programme.

Our involvement now includes weekly site visits to monitor operational controls, develop suitable and sufficient risk assessments (RA), maintain COSHH assessments, and ensure all policies and procedures remain up to date and proportionate to the risks on site. This partnership has strengthened site safety standards and provided ongoing assurance to both management and insurers.

Case Study

Motorsport Company

Cumbria

SafeEdge Consulting was engaged to perform an initial Health and Safety audit across the company's engineering and production facilities. The audit identified several key opportunities for improvement in management systems, documentation, and risk control.

Following the audit, SafeEdge delivered a structured improvement plan, including Noise at Work surveys, a comprehensive DSEAR assessment, and an update to the company's overarching Health and Safety Policy to align with current legislation and best practice.

We continue to provide quarterly site visits to review compliance and progress against the action plan, alongside remote advisory support through regular email and phone communication. This ongoing partnership ensures the company maintains a consistent, proactive approach to health and safety management across all operations.

Case Study

Construction Contractor

Midlands

SafeEdge Consulting supports this regional construction and refurbishment contractor, assisting with the development of robust site management systems and documentation to ensure compliance with the Construction (Design and Management) Regulations 2015 (CDM). Our work has included producing Construction Phase Plans, task-specific Risk Assessments and Method Statements (RAMS), and tailored toolbox talks for site teams. **SafeEdge** also provided training and documentation templates to help site managers plan, monitor, and coordinate works safely and effectively across multiple refurbishment projects.

This partnership has strengthened the company's safety culture and improved the consistency of site-level documentation and communication.
